

## OPERATING INSTRUCTIONS

Attach rubber adapter sleeve to flashlight. Insert Pro-Jector unit into other end of sleeve.

Insert film into film slot. Turn on flashlight.

Focus until picture is sharp by moving small lens tube in and out of Pro-Jector barrel.

For greatest brilliance choose a three cell flashlight making certain that bulb and batteries are fresh.

A white or light colored wall in a completely darkened room is best for projection.

To use as a viewer simply hold large opening towards light and look into small lens end. Focus same as in projection.
